SECTION C - DESCRIPTION/SPECIFICATIONS/WORK STATEMENT

C-7 Calcium Silicide Alternative

Calcium Silicide that meets the requirements for MIL-C-324C Class II type Calcium Silicide the specification is the preferred solution. Due to the current situation concerning the inadequate supply of MIL-C-324C qualified Calcium Silicide, the government is willing to accept cartridges produced with Perkins Rouge Calcium Silicide Lot C041024. The Explosive Sciences Branch at NSWC Crane conducted the wet chemistry testing in accordance with MIL-C-324C specification. The results concluded the Calcium and Silicon elements do not meet requirements indicated below:

Test Results		MIL-C-324C
Calcium	27.4%	30% minimum
Silicon	59.9%	60% minimum

All other test results were all within specification. Additional testing is currently being conducted at the primer and cartridge level, as described by the attached test plan, to ensure the primers manufactured with Perkins Rouge maintain the performance characteristics through environmental and aging factors. In addition to successful completion of the test plan, the primers that are manufactured for use on the resulting contract shall also adhere to the following:

- a. Primer Mix (FA # 874) requirements drawing 7548063
- b. M52A3B1 Electric Primer MIL-P-1394E
